

## OUR CONSCIENCE

**ENEA** began operations in 1984, focused on manufacturing and marketing of contemporary furniture. During these years has had an excellent outcome, with a significant presence in the world market and in many landmark buildings, with the help of renowned architects.

Apart from the right recognition from the market, it has received several awards, endorsing the innovative design and custom finish, always, with quality materials and processes focused on excellence.

But **ENEA** goals do not end there, but commitment to achieve all this whilst taking into account the Environment, part of the Sustainable Development, ie, the goal is to meet current needs without compromising future resources.

In **ENEA** we believe that small steps are worth much, and that is why we strive every day with our policy of continuous improvement and to do our bit for the care and respect the environment.

*“The world is a dangerous place. Not because of those who do evil, but by those who do nothing about it.”*

Albert Einstein

## CONTINUOUS IMPROVEMENT THE ROAD TRIP

**ENEA** has started to travel an upward path in which each step involves a little more effort than before, but also a greater reward.

One of the plans in the future will be to have the international Ecodesign normative, which is being developed as ISO and which will be obtained immediately, due to **ENEA** is certified in UNE 150.301 Management System Certificate of Ecodesign.

*“If you do not recognize any problem, it is not possible recognizing the need for improvement. Complacency is the enemy of Kaizen strategy.”*

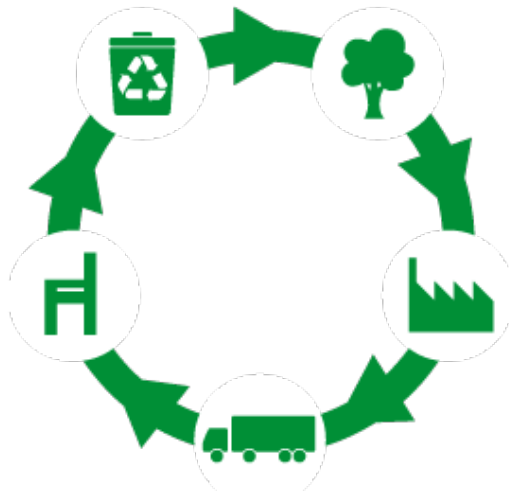

**Masaaki Imai** (Kaizen philosophy father-continuous improvement-)

## CONTINUOUS IMPROVEMENT, THE SIMPLICITY OF AN INTEGRATED SYSTEM

### How do these standards work?

The implementation and operation of these standards are the same and they are cyclical.

They are planned, implemented and checked and in case that these are correct, they are extended and systematized.

Nevertheless the process doesn't end there and it is proposed a new improvement to beginning the cycle again.

### What are the benefits?

#### CUSTOMER:

Quality assurance, safety, reliability and environmental friendliness.

#### THE WORLD:

They help coordinate the effort to maintain, control the use and modification of the earth, water and air.

#### PEOPLE:

Contribute to improving the quality of life.

## TRANSPARENCY: INFORM TO THE CUSTOMER

### How to transmit the information?

We think in **ENEA** that ecodesign the products is not enough, because we think it is necessary to communicate the results.

In this case, taking references with the guidelines set by the PCR (Product Category Rules) written by Lars Thortveit and Christofer Skaar at the Norwegian University of Science and Technology according to ISO / CD 14025, has decided to draft an Environmental Statement Product (EPD).

### What is an EPD (Environmental Product Declaration)?

An Environmental Product Declaration is a Type III Eco-label that meets the standard 14025 and provides quantified environmental data of a product with preset categories of parameters, plus all the additional environmental information that the company wants to provide.

This is to provide clear and concise information about environmental requirements in products for promoting them, looking for a better environment. Contribute to improving the quality of life.
